

LD-150

Liquid Degreaser

Description: LD-150 is a formulation of degreasers and grease cutting/surface-tension reducing agents designed for fast removal of films, oils, fingerprints etc. from screen printing fabric.

Advantages:

- Fast removal of oils and other foreign films
- Economical
- Biodegradable
- Drain Safe

Availability: Full strength liquid: 1, 5, 30, 55gallon

Application: Remove all ink from screen with a compatible, non-film forming ink remover, such as SCREENCHEM BIO-2. Remove emulsion with a compatible emulsion remover such as SCREENCHEM ER-288. If ghost image remains, reapply Ink Remover or use a Haze Remover such as SCREENCHEM GIR-4U. As the last step in the process apply LD-150 to the screen with a towel or by spray. Scrub the screen for best results. Remove LD-150 using a medium pressure, low volume cold water rinse. Best results are usually obtained by using a low pressure (i.e. Garden Hose without pressure nozzle) rinse as the final rinse. This prevents splashback and will help minimize pinholes. Allow screen to dry completely before recoating.

First Aid: If Ingested: Induce vomiting immediately and pump out stomach if necessary. Seek medical attention.
In Eyes: Flush eyes with plenty of water for at least 15 minutes occasionally opening eyelids to ensure thorough irrigation.
On Skin: Wash affected area thoroughly. Remove and wash contaminated clothing before reuse.
